BLOOD COLLECTION SET

BETTER PRODUCT PRICE SERVICE WOULDN'T YOU?

Needle is retracted directly from patient, virtually eliminating exposure to contaminated needle

Automatic safety mechanism Safety engineered devices with "automatic or semiautomatic safety features were 10 times less likely to be associated with NSIs [needlestick injuries] than were devices in which activation of the safety feature was fully manual."*

Finger

grips allow

ease

for handling

- One-handed activation
- Easy to use

Remains safe through disposal

rigger indicator s color coded for needle gauge

> **Clear body** allows for flashback visualization

Needle retraction clamps tubing reducing the risk of blood exposure

- Superior technology at a lower cost
- Trigger design reduces the risk of inadvertent activation

 Kink-resistant tubing available in 7" and 12" lengths

• Not made with natural rubber latex, DEHP or PVC

May be used for short-term infusion (up to 2 hours)
